

## HB-120SLAFE High speed label cutting machine with exit roller

Option:  
Static Eliminator

Model	HB-120SLAFE	Voltage	220V/110V
Brand	Hongxin	Power	1000W
Name	High speed label cutting machine with exit roller	Cutting Speed:	200pcs/min
Cut Tool:	Hot and Cold Cutting	Cutting Width:	95mm max
Cutable Materials:	Trademark, pattern ribbons, lanyards	Cutting Length:	Max 9999cm

Trademark, woven wash label

Letter / patterned ribbons

Exhibition lanyards, letter gift ribbons

### Optional: Elastic band feeding system

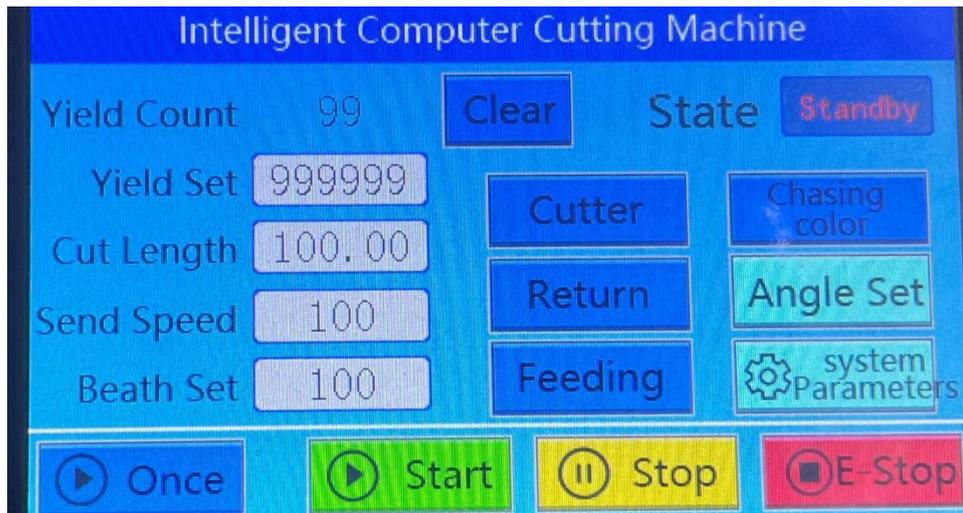

For materials with patterns on elastic bands, or for high-speed cutting of care label materials, consider adding an elastic band feeding device to reduce cutting errors and make machine positioning more precise.

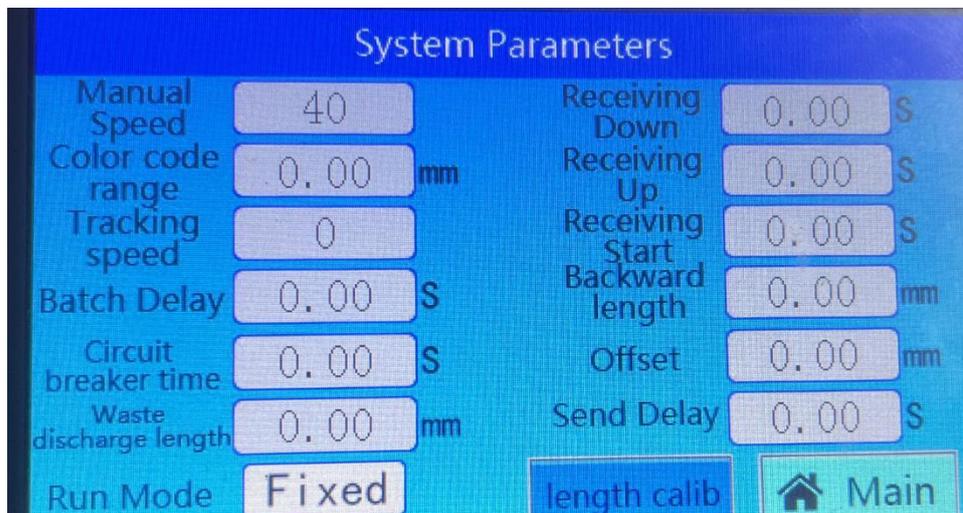

### Optional: Static electricity elimination system

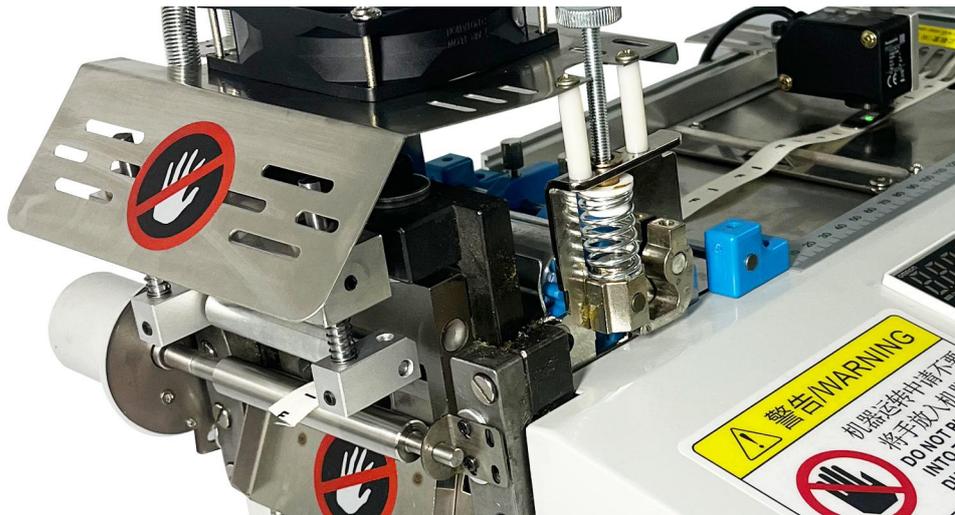

For materials that are prone to static electricity, such as labels, care labels, or thin ribbons, we offer an anti-static dust removal function to prevent the material from sticking to the machine or blade, resulting in cleaner cuts.

Touchscreen controls cutting speed and length; simple and intelligent operation.

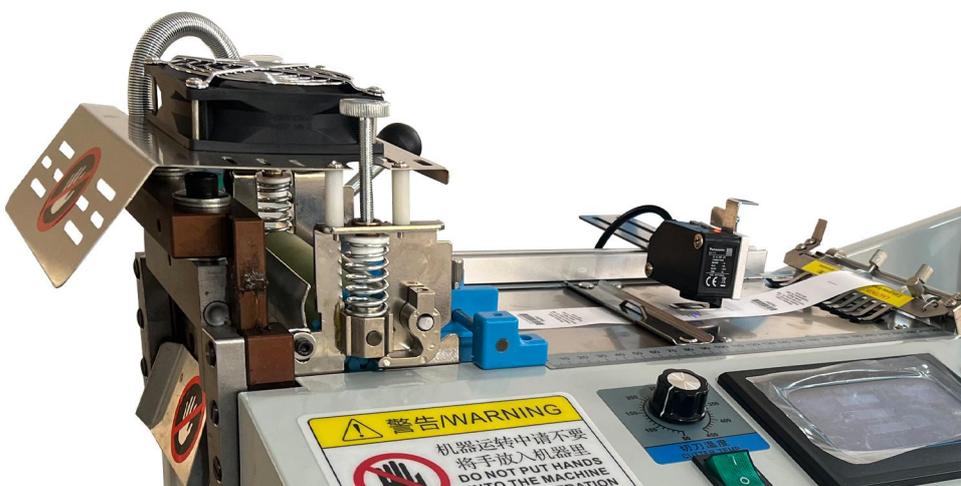

The sensor switch is adjusted via the touchscreen. When positioning and cutting are not required, change the Run Mode parameter to FIXED; when positioning and cutting are required, change the parameter to COLOR. Our machine also supports waste material cutting.

The addition of the EXIT ROLLERS function prevents material from sticking to the blade when hot-cutting thin ribbons.

Combined with Panasonic logo sensors, it ensures precise and error-free positioning.

It uses high-hardness blades, capable of cutting high-hardness materials such as leather.
